Safety Gates

Secure Stairs and Define Spaces

Play Yards

- Use to create a safe play area for baby
- Most styles allow you to add on panels as needed
- Combine with play mat for cushioned surface and added play value

The Question

- What do all styles of safety gates have in common?
- They all need to be mounted between two solid surfaces.
- How do we accomplish this?

The Secret Is Gate Mounts

- Gates mounts are the secret to safe, professional installations. Before you begin to install any safety gate you must have two solid surfaces usually across from each other, if you don't, you have to create them.

Thinking Outside The Box

- Most safety gates are design to work in limited types of spaces
- Don't depend on manufacturers to instruct you how to adapt the customers space to make them work
- The mark of a professional childproof is the ability to understand the products they install thoroughly and adapt

Types of Gate Mounts

More Gate Mounts

After the mounts

Once the gate mounts are installed we have our choice of which gates to use.

Remember

We need to take control, the space dictates the type of gate. Customers want to purchase safety gates like they buy most other products, by looks. We need to educate them on function first.

Some Interesting Customer Installations

Remember

- All pressure mounted and pressure mounted walk-through gates must be mounted straight across the opening, never on an angle and never on the top of the stairs.
